AXIOM MASTERCLASS × go>tech WORLD WORLD 2026

Agentic Engineering: Managing Multi-agent Teams with ADK & MCP

Coding Area · Day 1 | Tuesday, 10th November 2026 | 10:00 – 17:00 | ROMEXPO, Pavilion B1, Bucharest

WORKSHOP OVERVIEW

On Coding Area – Day 1, Gerard will lead the **Axiom Masterclass. Agentic Engineering: Managing Multi-agent Teams with ADK & MCP**, a hands-on workshop focused on developing autonomous, voice-first agent teams with Angular.

Participants will code throughout the workshop, working directly with **Antigravity IDE**, the **Agent Development Kit (ADK)**, **TypeScript** and the latest **Gemini** models. Through practical labs, they will build agent teams, connect them to tools and other agents, and progress towards creating a real-time Personal AI.

The workshop will cover

10 MODULES · HANDS-ON

01 Antigravity IDE and managing multi-agent teams	06 Tool interoperability with MCP
02 Code-first development with ADK and TypeScript	07 The Agent-to-Agent (A2A) Protocol
03 Sequential, Parallel and Loop Orchestration	08 Hands-on labs for building agent teams with MCP and A2A
04 The Agentic Loop: Plan – Execute – Verify	09 Developing a Gemini Live Native Audio Client
05 Building autonomous agents with goal-exit conditions	10 Real-time voice and video streaming with WebRTC and WebSockets

By the end of the workshop, participants will have worked hands-on with the technologies and patterns behind autonomous multi-agent systems and real-time AI experiences.

What you'll need

- Basic knowledge of **Node.js** and **TypeScript**
- The **setup instructions** completed before the event (see page 2)
- A **fully charged laptop** (and charger)

Attendees will have access to all materials, GitHub repositories, resources, and links and will receive setup instructions the week before the course to complete beforehand.

SPEAKER SPOTLIGHT

Meet Gerard Sans

Computer Science Engineer & Google Developer Expert in AI, Cloud and Angular

@gerardsans

Gerard Sans is a Computer Science Engineer and Google Developer Expert in AI, Cloud and Angular. Formerly an AWS Amplify Developer Advocate, he now leads Axiom Professional Trainings and organises the NextAI London community.

Passionate about the future of AI, Gerard shares his knowledge and experience through talks, hands-on workshops and mentoring, helping developers explore the latest developments in AI and agentic engineering.

MANDATORY · BEFORE THE EVENT

Pre-Event Setup Checklist

~15 min
TIME TO COMPLETE

Please complete **steps 1–3 before arriving** at the Coding Area on **Tuesday, 10th November (10:00–17:00)** so we can dive straight into coding.

Sat 7 Nov → REPO LIVE
7 – 9 Nov → CLONE & SET UP
Tue 10 Nov → WORKSHOP

01 Install Google Antigravity IDE

During the workshop, we will use **Google Antigravity IDE** to build and orchestrate parallel multi-agent teams.

1 Download the standalone IDE

From **antigravity.google/download**, scroll to **Antigravity IDE (Standalone)** and download the installer for your OS:

macOS
macOS 12 (Monterey) or later · Apple Silicon or Intel `.dmg`
or `brew install antigravity-ide`

Windows
Windows 10 (64-bit) or Windows 11 · x64 or ARM64 `.exe`
or `winget install Google.AntigravityIDE`

Linux
Ubuntu 20+, Debian 10+, Fedora 36+, RHEL 8+ · `glibc ≥ 2.28` `.tar.gz`

2 Install & authenticate

- Run the installer and launch **Antigravity IDE**.
- Select **Continue with Google** and sign in with your **personal Google Account (Gmail)**. Don't select "Use business account" unless you have pre-configured Google Cloud Enterprise licenses.
- Accept the default settings, theme, and terms to complete onboarding.

3 Verify Node.js & Git

In the integrated terminal (Node v20 LTS or v22+):

```
$ node --version
$ npm --version
$ git --version
```

02 Plan your token budget & agent quotas

We will run intensive multi-agent workflows across a full day (**10:00 – 17:00**), so managing your Antigravity token quota is critical. Antigravity meters agent usage across two windows:

5-hour rolling window
Active burst capacity that refreshes every 5 hours.

Fixed weekly limit
Hard cap on total agent work within a 7-day period.

⚠ OPTION 2A

Free Tier · Individual Plan – $0

- **Do NOT play with the IDE before the workshop.** The weekly limit is tight — don't run test agents or experiment during the **7 days before 10th November**, or you'll exhaust your allowance before we begin.

⚠ Hit the weekly limit and your agents are locked for the rest of the week. It can **only be unlocked by upgrading to Google AI Pro.**

★ OPTION 2B · RECOMMENDED

Google AI Pro · Paid Tier

- Expanded 5-hour refresh quotas, a significantly higher weekly limit and priority access to the latest frontier models for the entire session, without interruption.
- Subscribe on your personal Google account at **gemini.google/subscriptions** or via Google One.

110 RON / month in Romania (≈ €22 / $20). Often a 1-month free trial — cancel anytime after the conference.

03 Access workshop resources & GitHub repository

All workshop materials, starter code, live links, and this setup guide are centralised in a single hub:

linktr.ee/build_with_ai

- **This setup guide** incl. last-minute updates
- **GitHub repository** — starter templates, ADK/MCP labs, Gemini Live audio client
- **Documentation** & cheat sheets
- **Workshop slides** (added after the event)

The GitHub repository and final lab instructions go live on **Saturday, 7th November 2026**. Scan or bookmark the Linktree and clone the repo between **Sat 7 and Mon 9 November** so you're 100% ready for Tuesday morning.
